Can any anon help me with the pass for the pebbleproxy? I'm 100% missing something super obvious, or I'm just too stupid to do it correctly, but for the life of me I can't seem to get it right. The index itself says the pass is just a disco elysium (without spaces all lowercase), but I've tried it multiple times, with and without the "." and "." and nothing seems to work. I just want to spend some time chatting with my bots so I can take my mind off the fact that I didn't bother generating a token for MysteryMare's proxy thinking it was going to be a temporary thing, and I can't even do that TwT. <https://rentry.org/pebbleproxy>

i'm taking a little break — not retiring for good, but scraping has been eating up way too much of my free time and i need to focus on other stuff (including replying to all ur emails i will get to them RIGHT NOW i swear!) the proxy will remain up but i won't be able to guarantee consistent uptime for any model. i'll still probably scrape a bit and if i find any keys they'll go right into the proxy, but this is gonna be an "it's up when it's up" situation for the near future. really sorry about this, i feel awful bc i firmly believe claude access is a human right and i hate to leave you guys dry :(

1 that we continue to persist at all is a testament to our faith in one another

thank you to everyone who sent me nice emails, thank you to everyone who enjoyed solving my silly lil riddles, thank you to each and every proxyhost (especially unreliable fiz and dandy, they were all huge helps to me and i appreciate them dearly (no fiz didnt give me any keys lmao, dandy was the only one who donated keys)), thank you to botmakies, HUGE thank you to everyone who donated, and yes, thank you to locusts too. i will never stop loving /aicg/ and i promise this is not the end <3
